## 1 Define your problem statement

What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.

5 minutes

PROBLEM

**How might we Overcome the issues on the fast charging og electric vehicles?**

### Key rules of brainstorming

To run an smooth and productive session

- Stay in topic.
- Encourage wild ideas.
- Defer judgment.
- Listen to others.
- Go for volume.
- If possible, be visual.

## 2 Brainstorm

Write down any ideas that come to mind that address your problem statement.

10 minutes

### Person 1

This problem of mental pressure comes due to lack of charging infrastructure which is improving day by day

charging a heavier electric car could be a major problem for any electric car owner if she lacks proper setup

It's be a horrific increment in the demand for electricity and as of now,we are majorly dependent on burning fossils for generating electricity.

### PERSON 2

The cost is the most concerning point for an individual when it comes to buying an electric vehicle

Battery cost is going to be a pressing issue for the EV buyers because electric vehicles are new to both market and customers

since it is useful for every citizens it must be affordable for everyone

### PERSON 3

Temperature can affect the battery of an EV at a larger extent

Humidity levels and temperature affect the performance, safety of batteries in EV

They should produce the upcoming Electric vehicle suitable for all the temperature

### PERSON 4

Every second electric vehicle-making company has its own different charging port which is becoming a hurdle to setting up a proper charing ecosystem

The essential way to solve this problem is to develop advanced electrode materials for fast - charging

The Electric vehicle producers should offer more facilities to their clients

## 3 Group ideas

Take turns sharing your ideas while clustering similar or related notes as you go. Once all sticky notes have been grouped, give each cluster a sentence-like label. If a cluster is bigger than six sticky notes, try and see if you and break it up into smaller sub-groups.

20 minutes

We need to improve the infrastructure for the fast charging of our Electric vehicles

*Infrastructure*

*Temperature*

We should maintain the temperature for the better performances for the Electric vehicle batteries

The cost of the battery of the electric vehicle must be affordable for everyone as it is used by everyone

Affordability

Availability

The charging facility and the cost facility should be available for every electric vehicle user

## 4 Prioritize

Your team should all be on the same page about what's important moving forward. Place your ideas on this grid to determine which ideas are important and which are feasible.

20 minutes
